

CHAIN2GATE

ENERGY AWARE PLATFORM

CHAIN 2 technology is the only channel which allows the user to receive the fiscal data supplied by the Open Meters.

ENERGY
AWARENESS

RESIDENTIAL

This new, innovative **Meter will be installed by all the utilities and energy distributors in Italy as the single meter** for electricity, enabling energy awareness services without the need for complex installations.

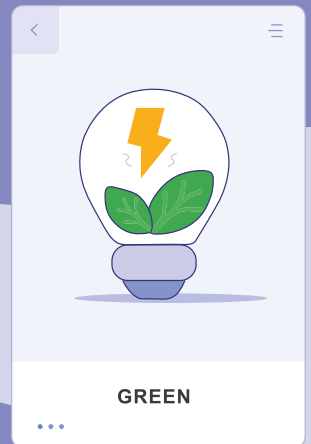

This represents a **market of 40 million houses**, buildings and small business.

PRODUCT FAMILY

Our product family **Chain2Gate** communicates directly with **the Open Meter** and is versatile for installation, design and connectivity needs.

Thanks to the awareness of their consumption and production data, in an increasingly electric traction market, **the final consumer participates actively in the energy flexibility market:** making a decisive contribution to sustainability, energy efficiency decisions and maximizing self-consumption.

Applications

The variety of applications and use cases is one of the most innovative steps made available by CHAIN 2.

ENERGY COMMUNITIES

STREET LIGHTING

RESIDENTIAL

RENEWABLE ENERGY

SMALL BUSINESS

E-MOBILITY

SMART APPLIANCES

ENERGY COMMUNITIES

- awareness of consumption and production data
 - maximization of the surplus use of energy produced
 - reduction of waste between 7 and 10%
 - consumption time band setting
 - consumption, production and saving reports
 - peak Shaving (automatic disconnection of unnecessary loads)
 - load Shifting (shifting of consumption to optimize the surplus of energy produced)
-

STREET LIGHTING

- consumption monitoring directly from the Meter of the distributor
- consumption monitoring by integrated three-phase energy Meter
- notifications in real time of activations and resets, system status (lamp fault, blackout), intervention of the automatic switch of the electrical panel
- remote control (LTE) of the plant: on/off, twilight sensor, programming and monitoring of on/off times, astronomical calendar

Applications

RESIDENTIAL AND SMALL BUSINESS

- awareness of consumption and production data
 - preventive alarm to avoid blackouts
 - maximization of the surplus use of energy produced
 - reduction of waste between 7 and 10%
 - consumption time band setting
 - consumption, production and saving reports
 - peak Shaving (automatic disconnection of unnecessary loads)
 - load Shifting (optimization of absorption from the grid at the most convenient times)
-

E - MOBILITY

- autonomous power modulation based on the load of the home network to maximize performance
- vehicle recharging in the most convenient time slots
- participation in the energy flexibility market: Demand Response logic
- maximization of self-consumption: management of the energy Surplus

RENEWABLE ENERGY

- awareness of consumption data
- maximization of the self-consumption: optimized management of the energy Surplus
- priority activation of loads which dispatch a potential energy Surplus
- warning of faults or system malfunction
- indication and tracking of the instantaneous power produced, used and fed into the grid

SMART APPLIANCES

- autonomous modulation of power based on the domestic network load to maximise performance and avoid disconnection
- warning of network overload in order to minimise the risk of blackouts
- participation in the energy flexibility market: Demand Response logic
- maximization of auto-consumption: the use of the energy surplus

Software Tools

CHAIN2GATE STARTER KIT

The Chain2gate Starter kit is composed by:

- N°5 Chain2gate Devices
- APP Temporary use license (demo version)
- CLOUD Temporary use license (demo version)
- Experimentation Support Activities:
 - OPEN METER 2G Configuration for CHAIN2 activation
 - Support for the CHAIN2GATE APP & CLOUD implementation
 - Support for CLOUD Data Visualization

BROKER MQTT

Through the MQTT Service we allow third party software to receive the data collected by Chain2gate and integrate it into its own platform.

UNIVERSAL CLOUD DOWNLOADER (UCD)

The UCD is a Cloud Architecture for the notification and distribution of new release files or software modules.

The Universal Cloud Downloader service allows the firmware update of the devices remotely through a Cloud connection even if installed and operational in the field (FOTA).

CHAIN2 PORTAL SERVICE

The Chain2 Portal Service is a Web Portal that as Asset Provider, we provide to make the association service on the distributor's portal between the user device and the Open Meter.

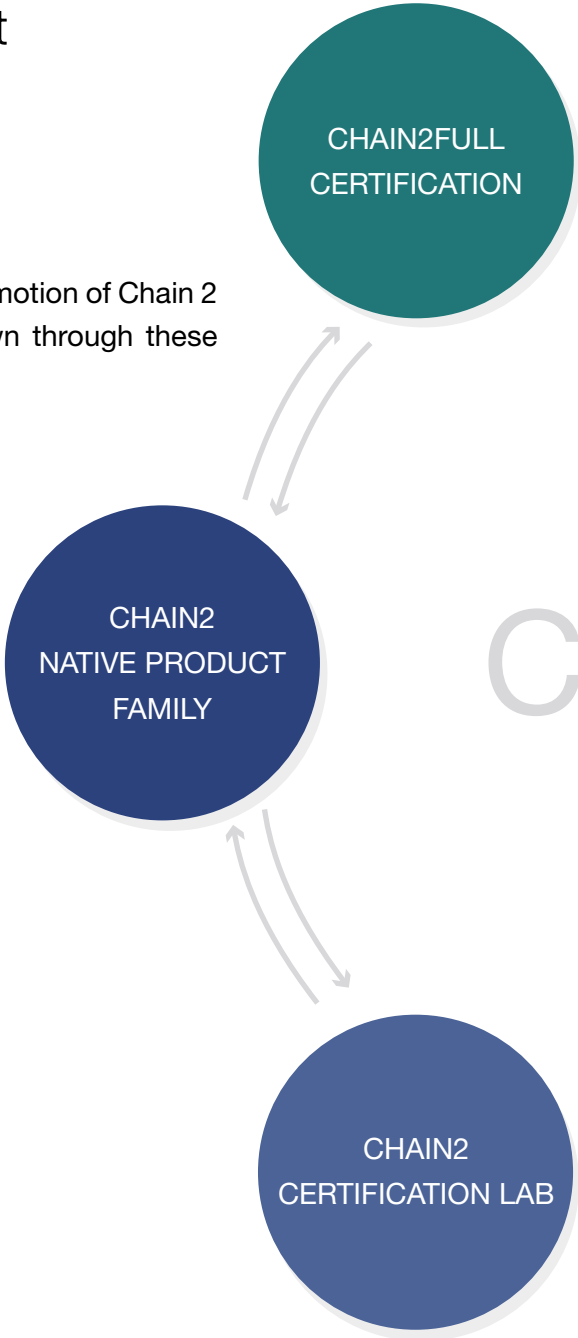

JCD API

JCD IOT Protocol Architecture is a message-oriented architecture in Json format for Peer To Peer communication on local and Cloud networks based on MQTT or WebSocket transport. Easy and intuitive tool for programming the I/O section of the gateways.

Achievement

Our work for the promotion of Chain 2 technology, as shown through these **important steps:**

CHA

Labs

I-LABS SMART ENVIRONMENTS

Jesi, Ancona (Italy)

Infrastructure capable of evolving and experimenting, aimed at encouraging the exchange of knowledge and skills among research centers, companies and universities.

The Laboratory represents a privileged location for the experimentation of the CHAIN 2 functions and subsequent integration of other technologies.

The laboratory will be used for:

- technology development
- integration and testing
- development of interoperability solutions
- re-creation of different types of electrical supplies with real or simulated loads

IN COLLABORAZIONE CON :

E-MOBILITY LAB

Recanati, Macerata (Italy)

The development of an infrastructure for charging electric cars spread throughout the territory to:

- follow a constantly growing market, which in Italy, in 2020, saw the vehicle fleet rise to 3.2 million (+155%)
- attract a type of tourism that is increasingly attentive to eco-sustainability issue
- become a reference point for frontier technologies

LIVING LAB

Recanati, Macerata (Italy)

Positive experiences in the field of energy management inspired MAC, in 2014, to create an experimental laboratory dedicated to the study of technologies for energy efficiency and for the creation of an intelligent and collaborative Grid: “The Living Lab”.

Smart lighting solutions coexist with energy efficiency, Ambient Assisted Living, infotainment and Smart Home, all united by one common denominator: “comfort and energy efficiency”.
